I. Introduction

Pre-receipt inspection items (very important, please check them carefully in sequence):

1、Check for any damage to the appearance;

2、Verify that the machine is clean and the packaging is correct

3. The sealing band of the lock needs to be removed (after removing it, it can be attached to the back of the box for possible use in the next transportation);

4. Remind the logistics to carry a truck/electric forklift (choose one of the two);

Important note:

When delivering goods, please make sure that the equipment is standing on the front of the delivery. If the equipment is lying down or inverted, please refuse to accept it;

When receiving the equipment, please be sure to remove the outer packaging in the presence of logistics personnel, and sign for receipt only after confirming that the machine appearance screen and other parts are intact; if you find that the appearance of the equipment is damaged, please refuse to sign for receipt;

If you do not dismantle the outer packaging of the equipment when the logistics personnel are present, you will be

responsible for any damage found after signing for the equipment. Please be aware!

Inspection after receipt:

1、Check that the appearance of the machine is normal and free from defects, that the quantity of accessories and instructions is normal and free from appearance damage, and that the pump and liquid container numbers correspond to each other.

2. Before power-on, please take out the antenna in the equipment and connect it on the top of the equipment

3. Plug the machine power plug into the socket with the grounding wire, and turn on the machine power switch.

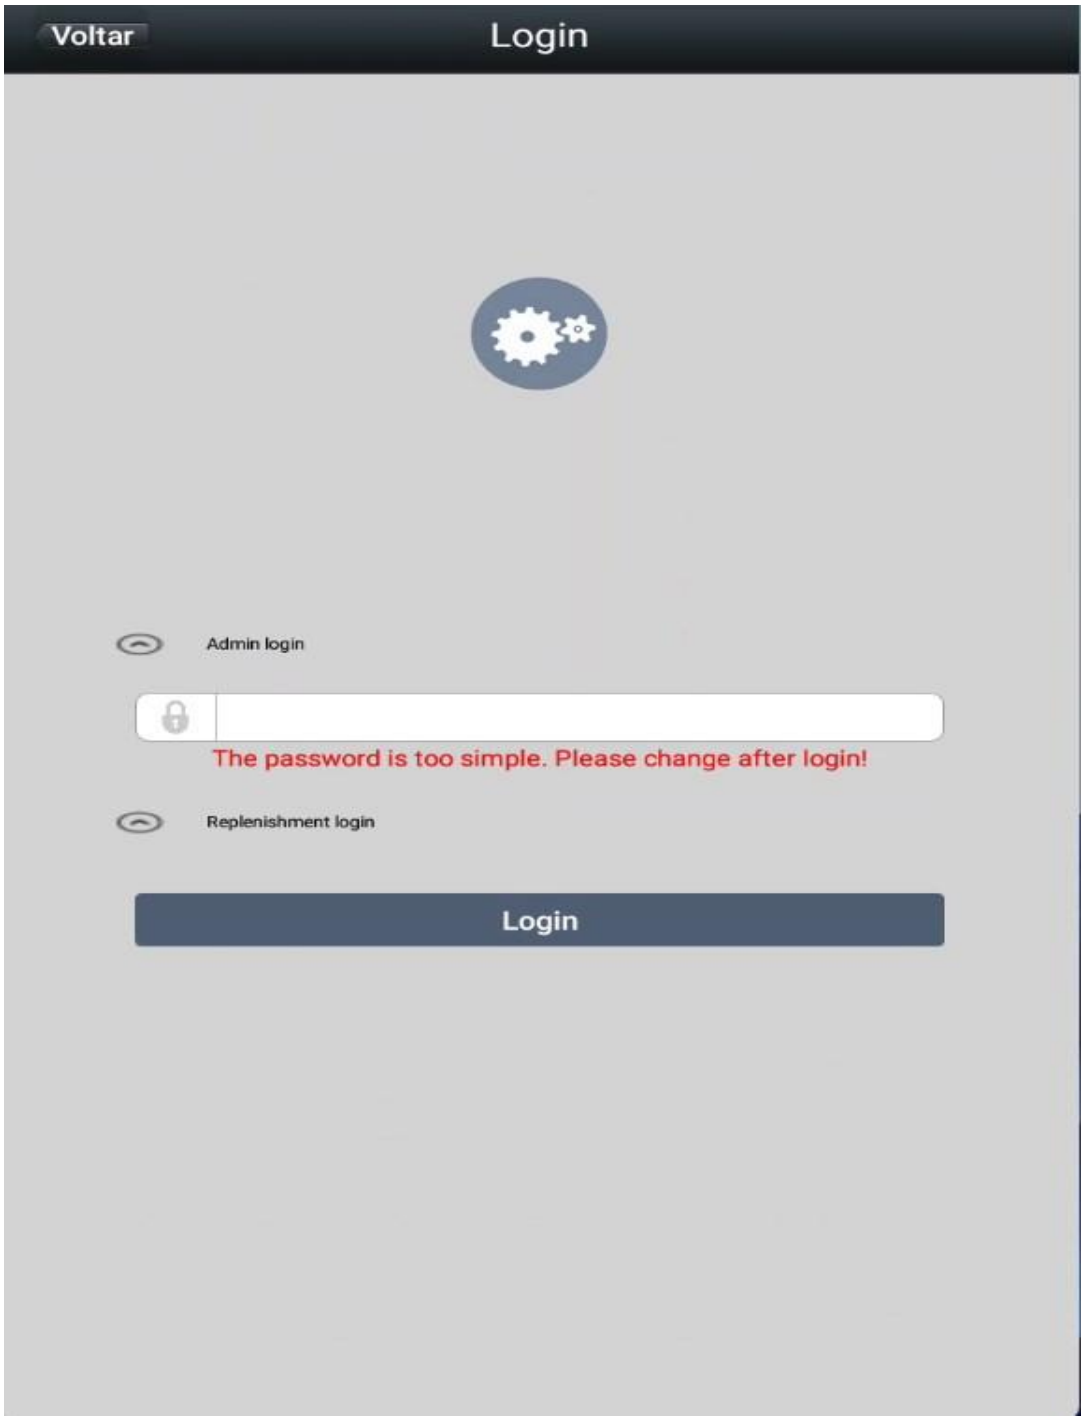

4. Check that the machine is connected to the Internet normally

2. Back-end login

1. After entering the shopping page of the vending machine, long press the device number at the top of the shopping interface to enter the background

2. Enter the login page of the background (select the administrator role and enter the default initial password 68 for login.

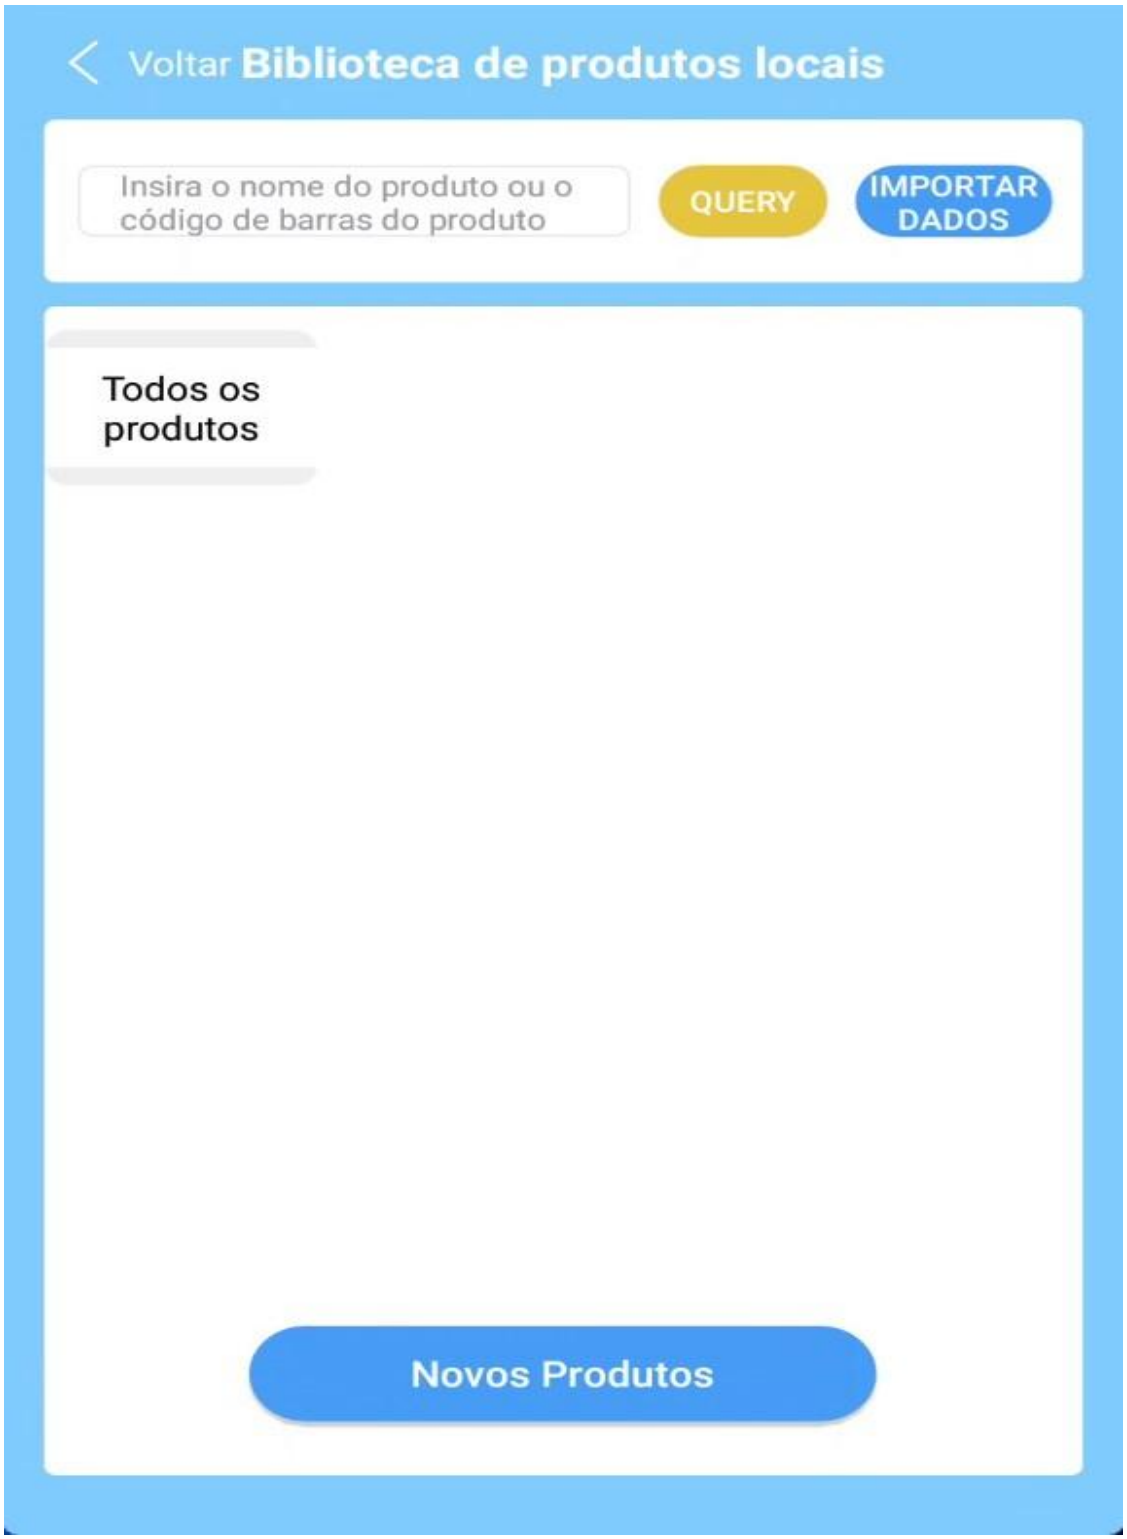

3. Operation management

1. Add goods

After entering the background management and operation interface, we need to add products in the local products first. Adding products can be done by importing excel tables from U disks or manually adding new products.

Add goods

The local product library has been completed with the addition of products

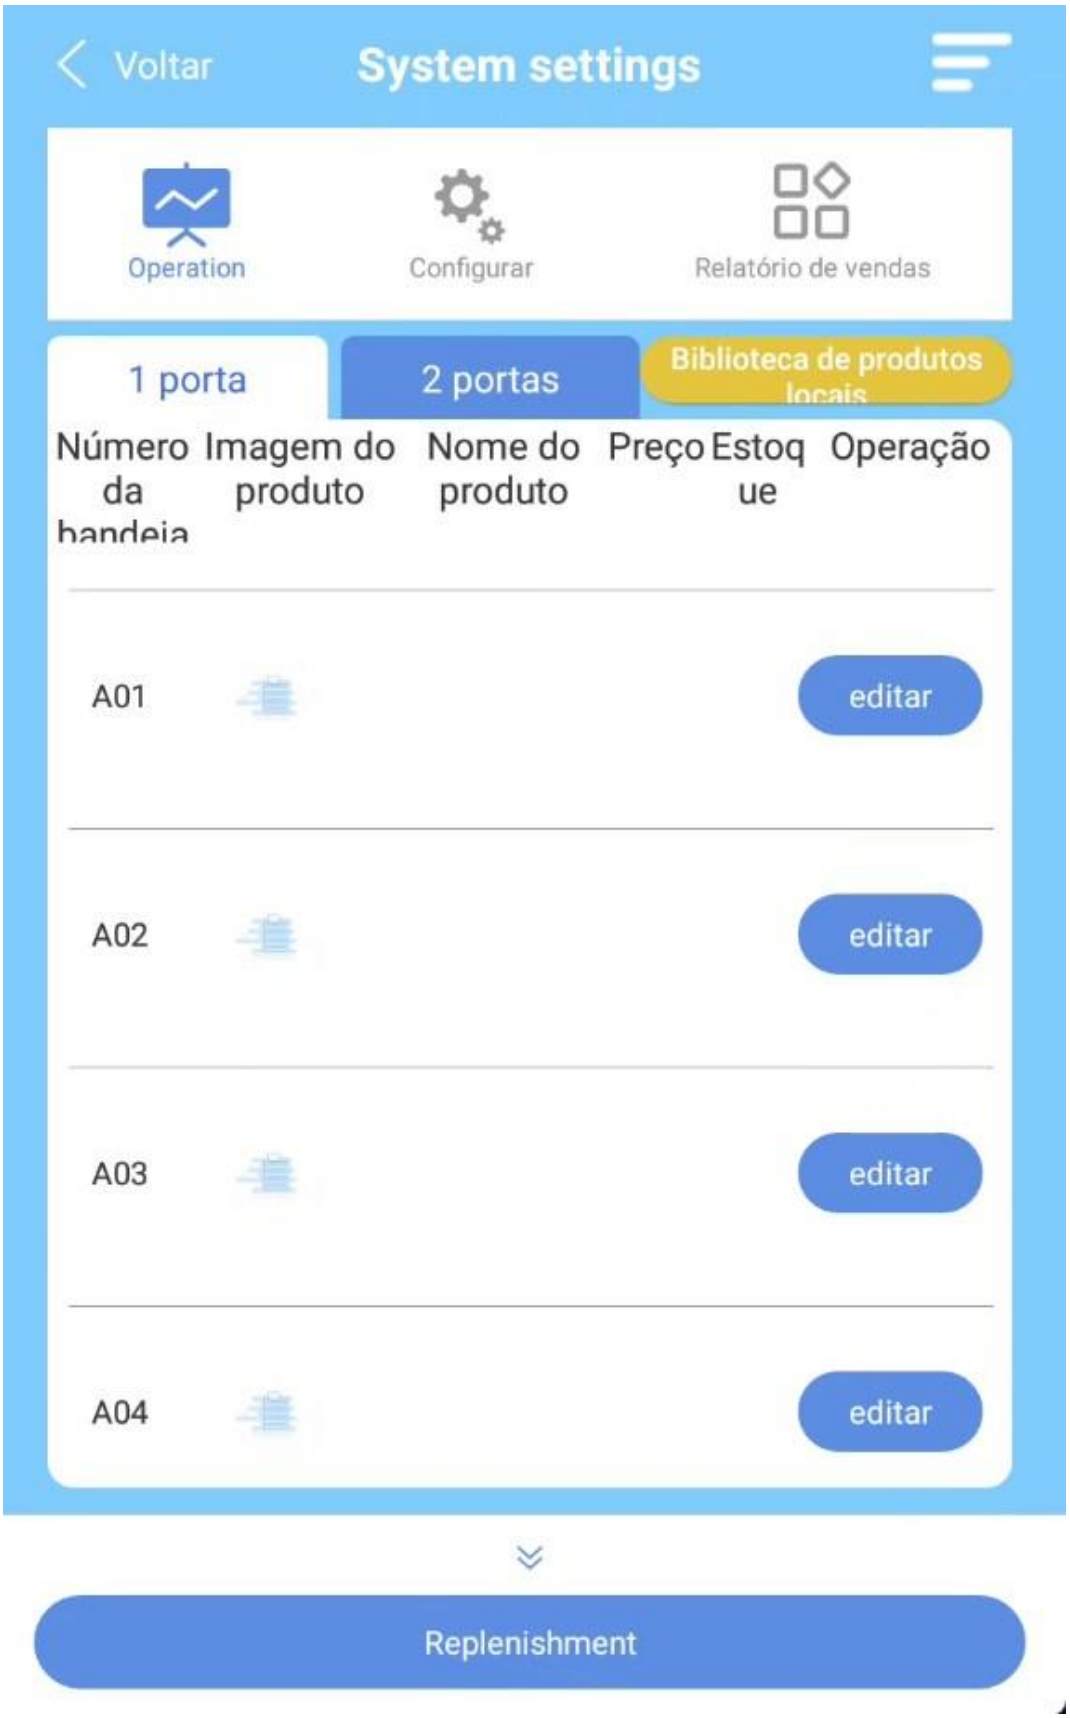

After the local product library is completed, we go to the operation interface to add the products to be sold in the product list.

Replenishment

Click the button to replace the local product library, add the good goods and then click save

Track Management--After all tracks have added products, we can perform product editing and deletion operations on the tracks. If equipment system malfunctions, you can click the clear fault button to resolve it. For devices with electronic price tags, if new or edited products are added, you need to click the electronic price tag button to synchronize backend product information.

4. Equipment replenishment

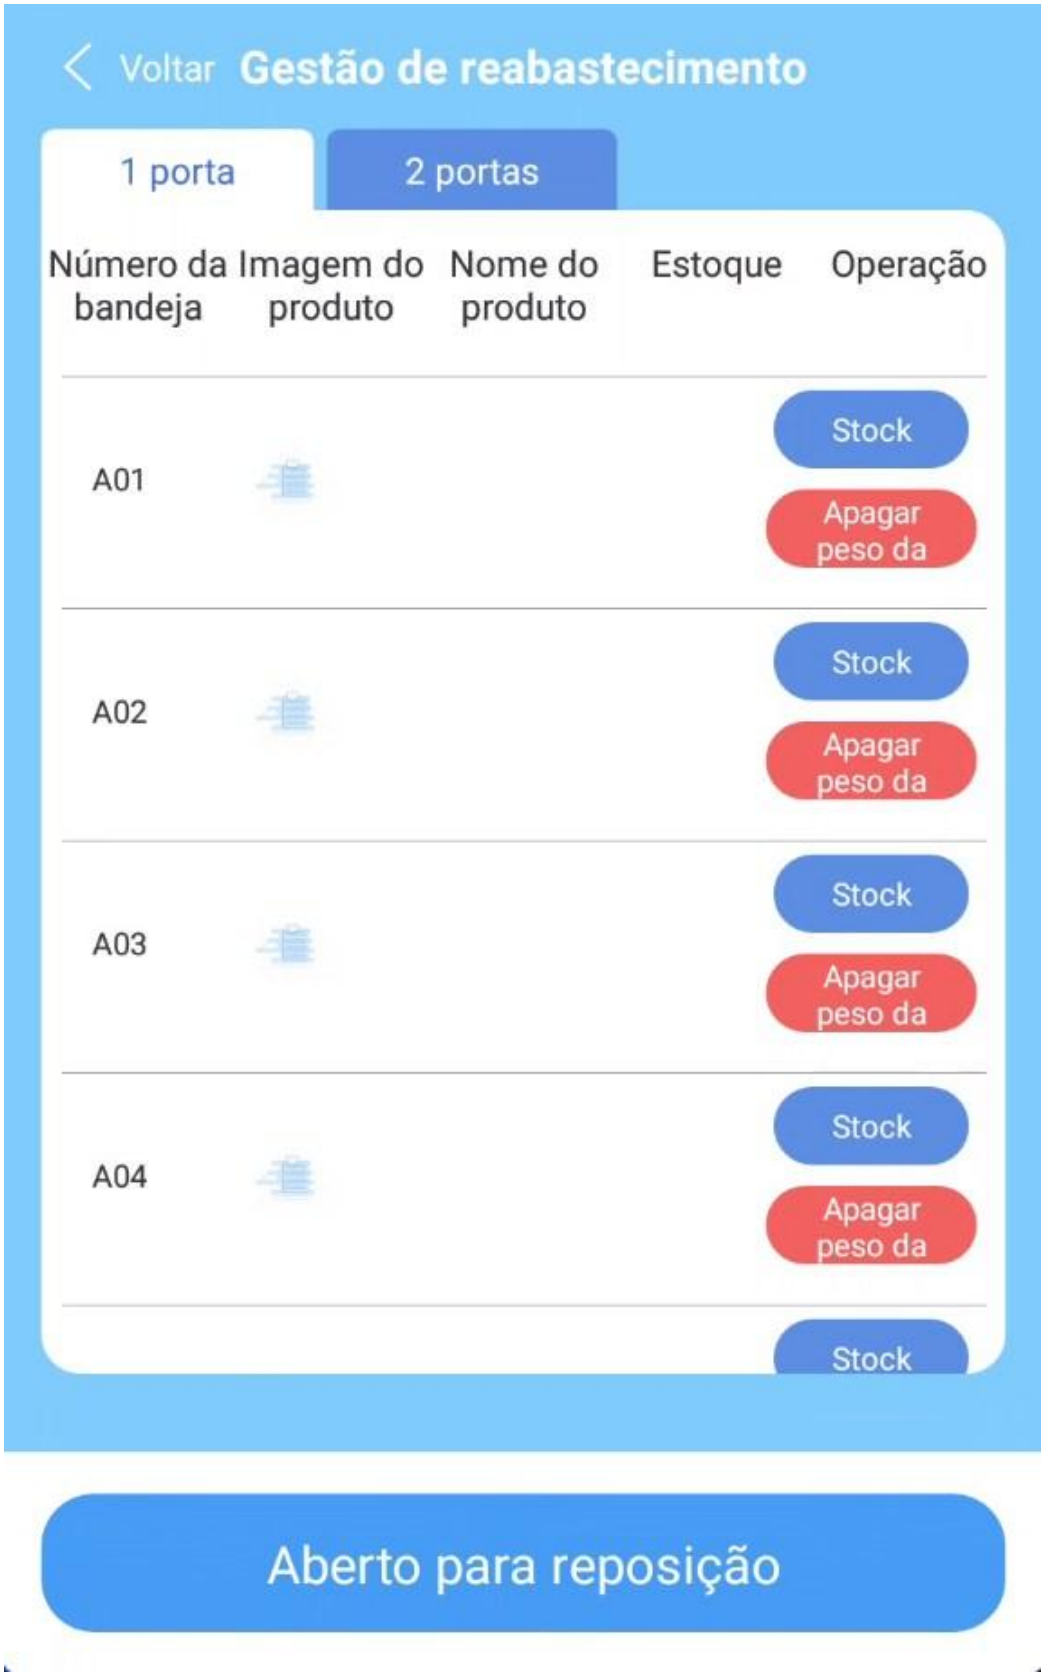

Click the replenishment button on the operation interface to go to the replenishment page

① After entering the replenishment management page, select the cabinet door that needs to be replenished first

② When replenishing or replacing goods for the first time, the empty pallet needs to be peeled off. Goods on the pallet can be replenished directly without peeling off.

③ Click the door replenishment button to replenish goods. When replenishing goods, you can directly put the goods into the corresponding pallet.

④ Modify inventory: If the inventory displayed on the page after replenishment is inconsistent with the actual inventory in the machine, you can click the modify inventory button to modify it

5. Machine Settings

1、Basic Settings

① Credit limit: when the credit limit in the card is lower than the set limit, you cannot open the door to shop

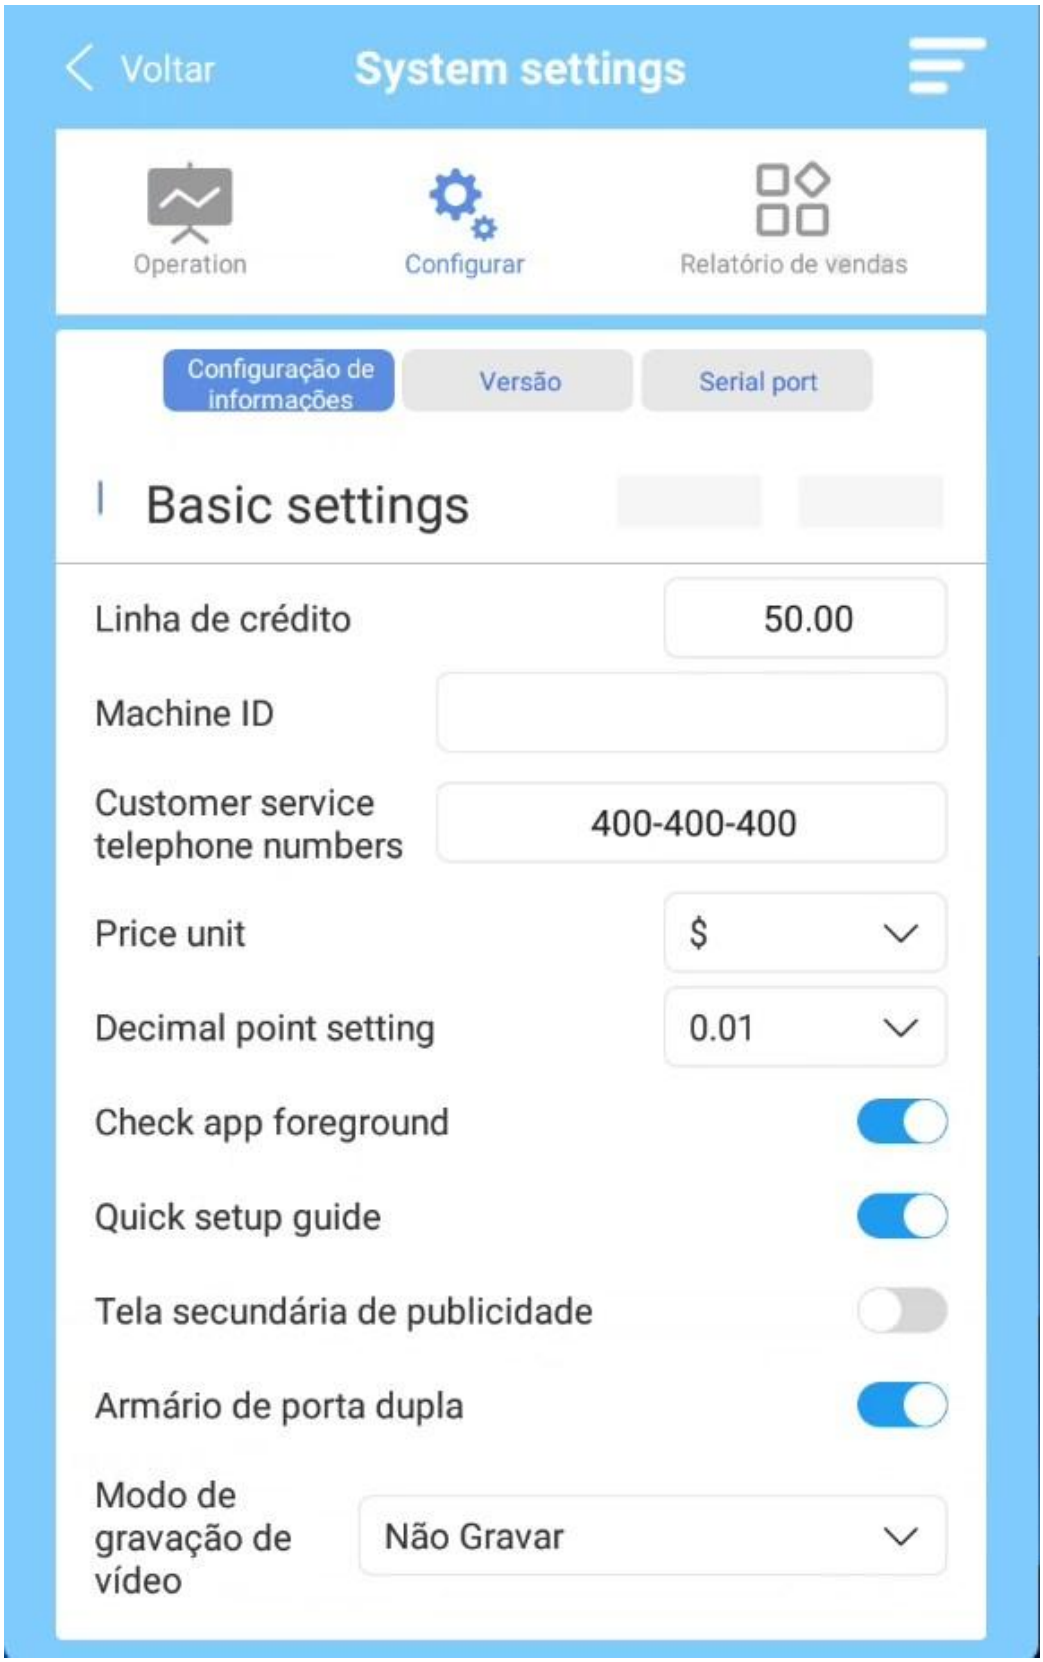

② Customer service phone: This number will be displayed at the bottom of the consumer shopping page and in the shopping instructions

③ Detection of APP front-end operation: After opening, the system detects that the Android selling program is in running state and automatically launches the selling APP

④ Quick setup wizard: After opening it, you can set the UI type, serial port, server and other system configurations in the shopping interface

⑤ Advertising secondary screen: If the device is equipped with a top advertising screen, this switch needs to be turned on; otherwise, the top advertising screen cannot display real-time shopping

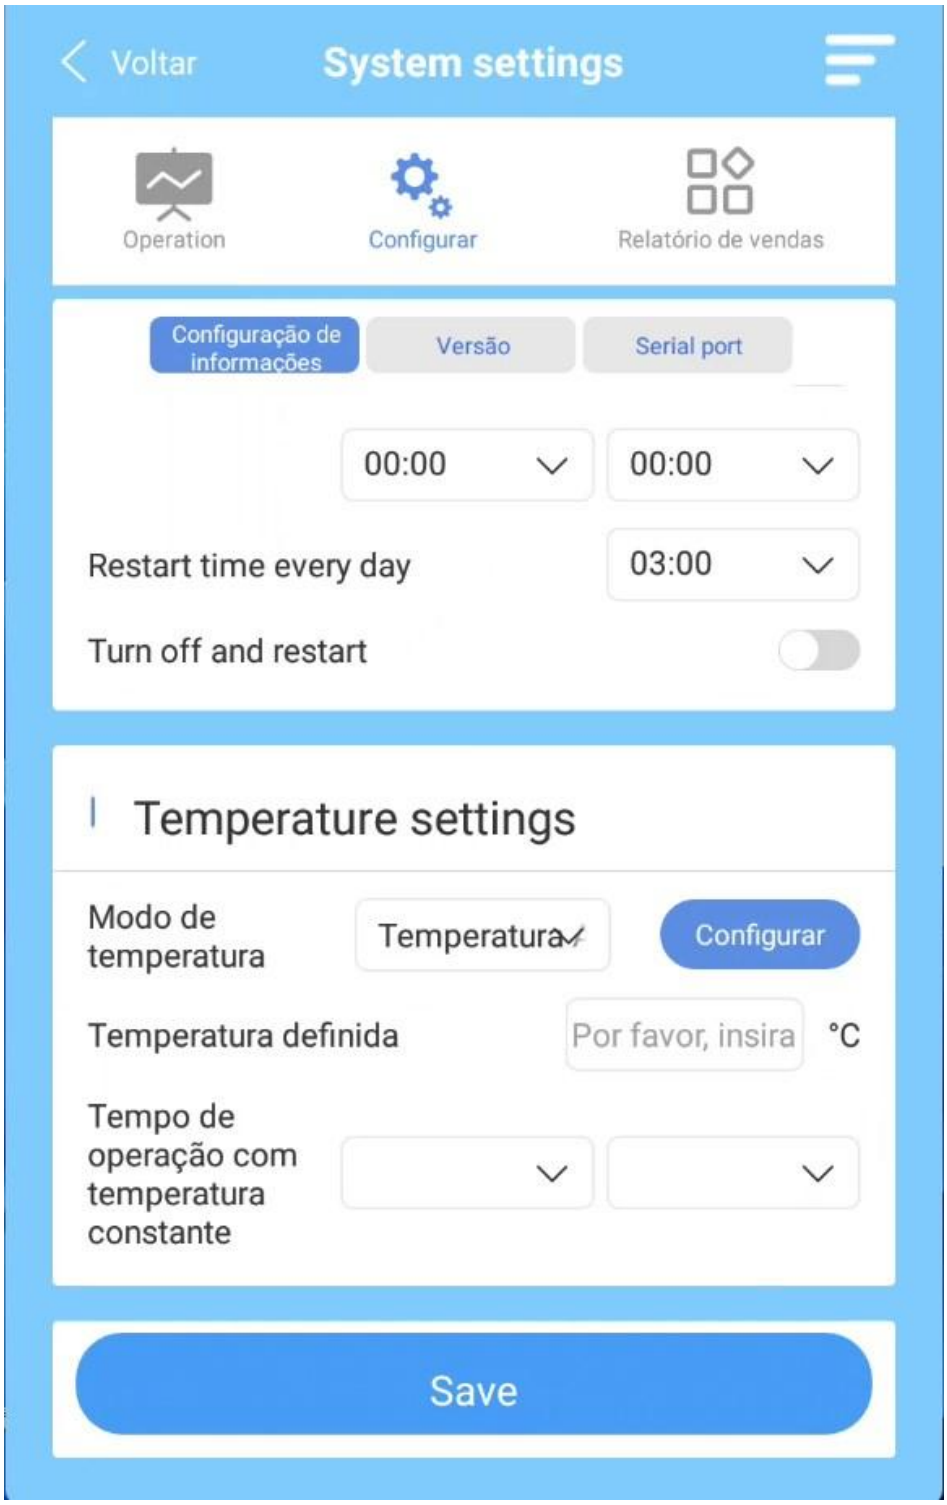

⑥ Double door cabinet: If the equipment is a double door cabinet, you need to open the switch of the double door cabinet. If not, there is only one door option when you open the shopping door

2、Time and temperature Settings

① Operation time setting: After setting different operation time periods, the machine will be prohibited from selling in other time periods

② Temperature Settings: The temperature mode is divided into normal temperature, cooling and heating. After setting the mode, you can also set the temperature and change the running time of the temperature (temperature controller). If not running, the machine will be in normal temperature mode.

3、program version

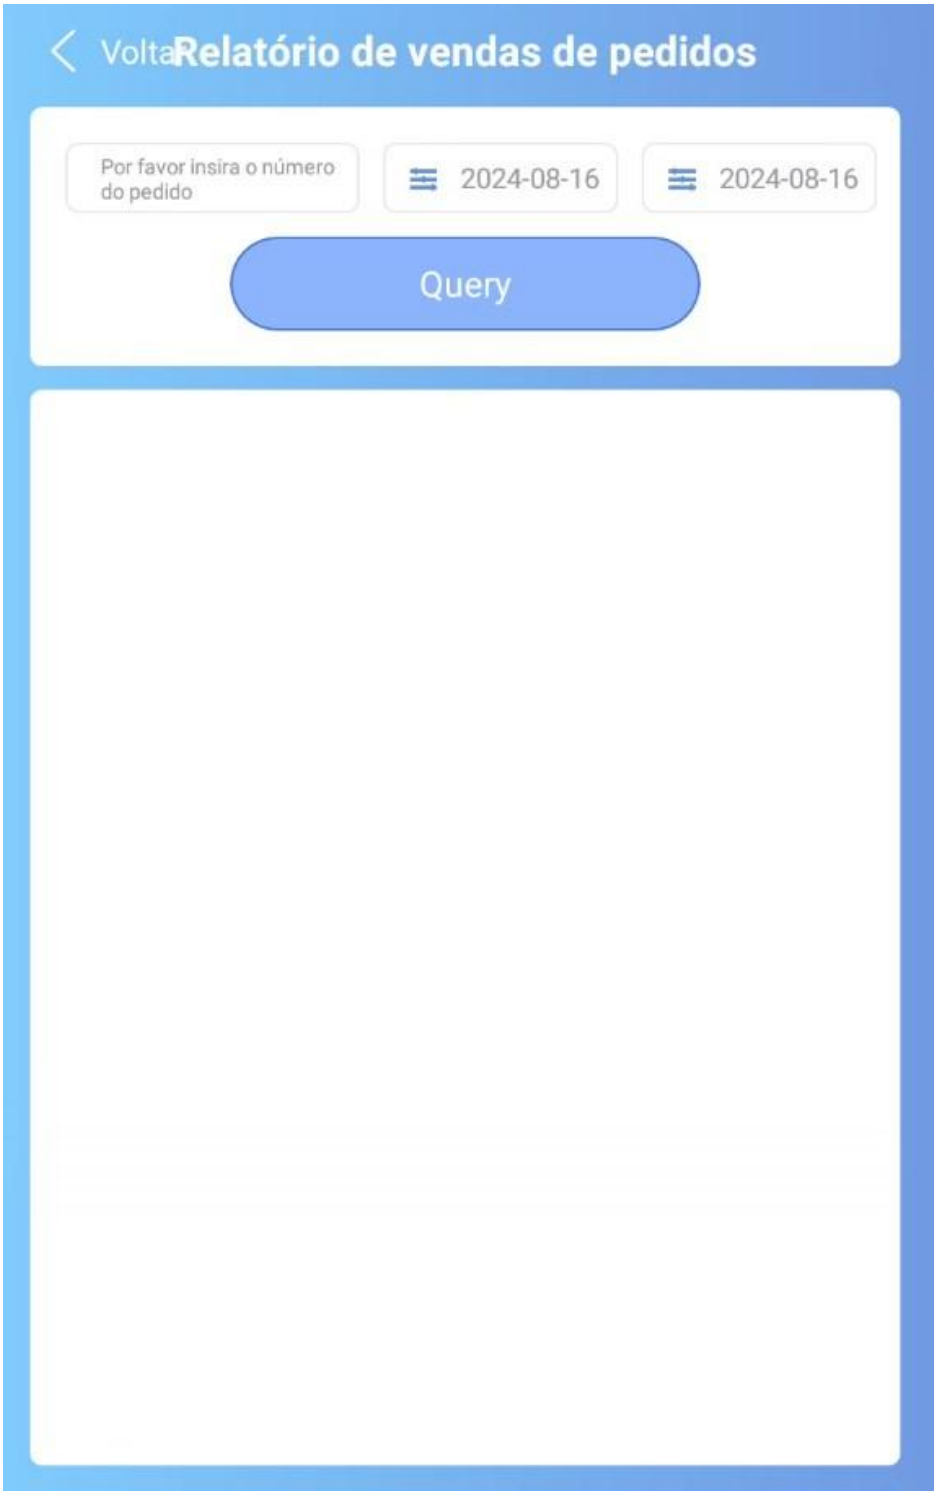

Because the gravity cabinet does not use the background, the system needs to update the program, and a U disk is needed to

prevent the latest Android program from being stored on the U disk, and then the U disk is inserted to manually update.

6. Sales statement

1. The sales report mainly shows the order record and replenishment record, and can find the corresponding order according to the order number and time.
